

GR WIND, aware of the need to provide a wide range of services to meet the requirements of the industry in general and the wind industry in particular, considers it essential to guarantee the quality, integrity and maintenance of equipment.

To this end, it provides qualified inspection, repair, maintenance and difficult access services for the different elements of wind turbines: rotor blades, tower, nacelle and access and lifting equipment. It is a benchmark in IRATA, GWO and DGERT training.

These services are decisive in improving performance and extending the useful life of equipment, and GR Wind has implemented an Integrated Quality, Environment and Safety Management System to ensure the supply of quality products and services in an environmentally sustainable way and in a safe and healthy working environment.

GR WIND, in line with its vision of contributing to a more sustainable world, is committed to:

- ✓ To be part of the solution with the client;
- ✓ To pursue excellence and excel on a daily basis in order to exceed the expectations of its stakeholders;
- ✓ To train the best employees and develop their skills in order to be a benchmark for excellence in their activity;
- ✓ Continuously seek solutions that minimise the environmental impact of its activities and continuously promote environmental protection.
- ✓ Ensure compliance with the requirements, legislation and regulations applicable to its activity or to which the organisation subscribes.
- ✓ Promote increasingly safe and healthy working conditions, encouraging and involving everyone in the improvement process.
- ✓ Manage risk factors, incorporating the necessary measures to promote health and safety at work.
- ✓ Continuously improve the effectiveness of the Integrated Quality, Environment and Safety Management System.

We keep you!
